ACKNOWLEDGE

As we understand eProject is another way to learn by building a website that is 80-90% similar to the websites many companies have. It was a project where we had to execute the processes as if we were building a website that our client wanted. The benefits of doing take part in this project are:

- ✓ Being able to make a plan for the whole process
- ✓ Enhance skills and value
- ✓ Have the opportunity to find more ways to build a website in a more minimalist way
- ✓ Improve group-work skill
- ✓ Learn how to express what we do in our project through words
- ✓ Work on real-life projects
- ✓ Able to use a different program to design layout
- ✓ Understand how important self-learning is during the main course

We want to thank our professor, Ms. Pham Thi Lanh who supported us during the project when we had any problems.

During the project, we made several mistakes and that is an enormous experience for us to widen our knowledge in web development.

Last but not least, we extremely appreciate that India Aptech has allowed us to study and do this project. We will take advantage of this opportunity to learn as much as we can and do our best so that in the future, we will be able to succeed and proud that we are studying at Aptech.

SYNOPSIS

This project is given to students who have completed the HCJS and AJS courses. However, during the activity, students were able to find and use more languages that support us to gain more information.

The objective of this program is to give a sample project of working on a real-life project. We have to make a plan and follow it step-by-step to get the result and understand how important to work as a team to create a useful and large website.

Before starting to take part in the process, students have to be able to use HTML, Javascript, and AngularJS to build the web. Another no less important is understanding English so that can get what the project required and do the report.

During the development, students need to update the process frequently and come to lab sessions with the assistant based on the schedule. Also, the report is required.

After finishing the website, the advantages that students will take are:

- ✓ Understand the process of building the website
- ✓ Able to express logical things through words by giving presentations and writing report
- ✓ Can write the essay to express what have done
- ✓ Have experience in web development
- ✓ Team-work experience

REVIEW 1

Problem Definition

Cambridge Hospital is one of the famous hospital in the town since 1928, now the hospital organization wish to change their existing website completely. The website which they demand is suppose to provide user friendly environment

and navigation. The important menu must be stated in the top section of the webpage. Also a decent look out and color combination is expected. The website is to be developed for the Windows Platform using HTML5, JavaScript and Geolocation. The site should work well in all leading browsers including Chrome, IE, Firefox etc.

Customer Requirement Specifications

LAYOUT

- The Home Page should be created with proper sections, graphics and with a suitable logo
 - Videos of important inventions should be included (size limit should be considered)
- Link on the home page must be included: Home, About us, Gallery etc
 - Each category mentioned above should brief user about respective topic.
- Must be made user friendly and uniformity in the color combination must be maintained.
- Navigation of the project must be made smooth.
- Must have Site Map

WEBSITE SHOULD INCLUDE

- How and when Nobel Prize awards started
- Various fields in which Nobel prize is awarded

- Nominations in all field in all years
 - Details of winners along with their career brief to be included.
- Related news
- Related event
- Gallery
- FAQs

HARDWARE/SOFTWARE REQUIREMENT

Hardware

- A minimum computer system that will help you access all the tools in the courses is a Pentium 166 or better
- 64 Megabytes of RAM or better

Software

- Notepad/HTML editor
- Dreamweaver
- IE 5.0/ Netscape 6.0

REVIEW 2

I. Home

The screenshot shows a medical service website with a light blue header. On the left is a logo consisting of a green cross inside a blue rounded rectangle. To its right is a search bar with a magnifying glass icon and the word "Search". In the center of the header is a "CALL FOR US!" button with a phone icon, followed by the phone number "617-665-2229". On the right is a "WORK HOUR" button with a clock icon, showing "6:00 AM - 22:00 PM Everyday". Below the header is a navigation menu with links: HOME, ABOUT US, DEPARTMENT, FACILITY, SERVICES, CENTRES, ACADEMIC, CONTACT US, and MORE. The main content area features a large banner image of a doctor in a white coat holding a stethoscope. Overlaid on the banner is the text "Professional Medical Service" in large, bold, green letters. Below this, a smaller text reads: "Medical availability and clinical practice varies across the world due to region different in technology". At the bottom left of the banner is a green button with the text "Make an Appointment".

VI.CENTRES

WELCOME TO CENTRAL HEALTH

At Central Health Alliance, your health is as important to us as it is you. Although newly formed, our dedicated and vastly experienced team have lived and worked in our local community for many years. We understand the needs of our community and have identified means to provide improved care for the benefit of all.

We strive to exceed all of your family's health care needs. We take the time during consultation so you feel assured with the treatment options and management strategies we formulate together.

CENTRAL OF CARE

At Central Health we provide our patients with comprehensive professional health care including

COMMUNITY HEALTH

VII.ACADEMIC

ACADEMIC OVERVIEW

View Vision CHA's academic vision statement declares that "Academics is Fundamental to Cambridge Health Alliance". Just over fifty years ago, Harvard University and the City of Cambridge affiliated in order to radically improve the poor quality of medical care at its public hospital. That decision spawned a new era. Academic programming attracted an excellent medical staff and fostered an increasingly empathetic, curious, socially committed and well-trained medical community. It served to improve the health of our local communities, but moreover, to shape medical practice, education and policy for the nation. Our reputation is increasingly well-known and well-earned in our communities, the Massachusetts State House, Washington D.C, and in academic centers around the nation. It would not be an overstatement to say that CHA would not exist today if it were not for its academic affiliations and pursuits.

ent We track academic progress in two ways: through this bi-annual narrative report and through a "scorecard". This report details our efforts to advance academics and to demonstrate how these synergize with CHA's strategic priorities. The scorecard highlights several easily tracked and important areas of emphasis and accomplishment.

These are some highlights of accomplishments of the past two years:

- emic**
- 32 CHA graduates of our residency programs joined the medical staff (77 since 2013);
 - 6 Harvard faculty members were promoted, including 2 to full Professor, and 2 Tufts faculty members to Associate Professor;
 - CHA staff published 225 peer-reviewed articles in journals accessible through the National Library of Medicine's Medline;
 - 27 new research protocols were approved this past year. The Office of Sponsored Research is managing 30 active grants and contracts;
 - All residency programs have received full accreditation including our fledgling Pharmacy Residency Program;
 - Dozens of faculty members from many disciplines participated in continuing education fellowships;
 - The graduating students rated CHA's "clinical learning environment" extremely highly.

In this report, we contextualize CHA as a socially accountable health care system, describing the linkage between CHA's academics and its strategic direction. We include our "Academic Scorecard". Next, we describe the major recent activities designed to achieve our academic vision, noting the obstacles we face and future plans. Brief descriptions of major initiatives and programs selected by the Department Chiefs follow. The report concludes with an appendix that includes our recent publication citations, award recipients and other useful data.

This report is undoubtedly incomplete. First, the purview of the Academic Council and the Center for Professional and Academic Development is limited to the credentialed medical staff. Second, despite collecting data through multiple means and surveying the Department Chiefs and Academic Council members repeatedly, we anticipate that individuals, programs or plans may have been misstated or left out altogether. We regret any errors and hope our readers will give us feedback to improve the next report.

Hospital Clinician	4
Therapy Assistant	5
Renal Coordinator	2

X.SUCCESS STORIES

In the last days of 2016, Mrs. M. Takako (71 years old, Japan) was brought to Vietnam by her family for treatment in the hope that "there is still water to slap". Suffering from glomerulonephritis at the age of 14, Takako underwent two kidney transplants in 1987 and 2004 in her hometown. Since 2014, she has returned to dialysis. "The doctor in Japan said that I am an elderly person, have had a kidney transplant twice, the blood vessels are more or less atherosclerotic, the connection for the kidney transplant requires high technology, so the third kidney transplant for me is almost impossible. impossible," said Mrs. Takako about her condition before the transplant.) When the door to life gradually closed, Mrs. Takako knew about Vinmec hospital. At that time, although it had only been in operation for 5 years, Vinmec was mentioned by the medical world thanks to its many successes in treatment, including organ transplantation. After much deliberation, the family decided to bring Ms. Takako to Vietnam,

choosing Vinmec as a place of treatment. Lucky smiled at the Japanese female patient when the kidney transplant was successful. After only two weeks, Ms. Takako's health was stable. "In Japan, the oldest person to receive a kidney transplant is 72 years old. I am 71 years old, just had a third kidney transplant, almost the oldest person," said Ms. Takako. The success of this kidney transplant has marked a new milestone for Vinmec hospital, and created opportunities for treatment for domestic and foreign patients in need of organ transplants.
